

## SMART LINKING CONTROL 2 CH 10A OUTLET

### Product Description

The SMART LINKING CONTROL 2CH 10A OUTLET is a mains powered, wall-mounting unit that allows 2 10A outlets to be remotely switched using the SMART LINKING CONTROL MASTER CONTROLLER, 8 CH BASIC REMOTE or LCD MASTER REMOTE.

Two buttons on the top of the unit allows the outlets to be turned on and off manually and lockable mechanical override switches on the front of the unit provides complete disconnection of the active wires.

The 2 CH 10A OUTLET can also relay messages from other SMART LINKING CONTROL units and can therefore extend the range of the SMART LINKING CONTROL network.

### Installation

- Mount the 2 CH 10A OUTLET in a location that is greater than 3.5m from the pool and less than 1.5m from a 10A household supply socket.
- Plug the devices to be controlled into the SMART LINKING CONTROL outlets.
- The **total current** of devices plugged into the SMART LINKING CONTROL 2 CH 10A OUTLET **must not exceed** 10A.
- Plug the mains input lead into the household 240V, 15A supply.
- Switch on the household 240V supply and the override switches on the unit.

## Operation

- To turn an outlet on or off press the corresponding button at the top of the unit. Ensure that the override switch is in the on position.
- To turn the outlet on and off using a SMART LINKING CONTROL remote or master controller, the remote or controller must first be programmed with the SMART LINKING CONTROLS 2 CH 10A Outlet's ID. Please read the remote or controller's instructions on how to add units.
- To transmit the 2 CH 10A Outlet's ID, press and hold the button at the top of the unit, corresponding to the outlet ID you wish to transmit. After holding the button for approximately 5 seconds, the LED will begin to flash. This means the unit is transmitting its ID. The ID will continuously re-transmit as long as the button is held and the LED is flashing.
