

SMART LINKING CONTROL 15A OUTLET

Product Description

The SMART LINKING CONTROL 15A OUTLET is a mains powered, wall-mounting unit that allows a 15A outlet to be remotely switched using the SMART LINKING CONTROL MASTER CONTROLLER, 8 CH BASIC REMOTE or LCD MASTER REMOTE.

A button at the top of the unit allows the outlet to be turned on and off manually and a lockable mechanical override switch on the front of the unit provides complete disconnection of the active wire.

The 15A Outlet can also relay messages from other SMART LINKING CONTROL units and can therefore extend the range of the SMART LINKING CONTROL network.

Installation

- Mount the 15A Outlet in a location that is greater than 3.5m from the pool and less than 2.5m from a 15A household supply socket.
- Plug the device to be controlled into the SMART LINKING CONTROL outlet.
- The current must not exceed 15A.
- Plug the mains input lead into the household 240V, 15A supply.
- Switch on the household 240V supply and the override switch on the unit.

Operation

- To turn the outlet on or off press the button at the top of the unit. Ensure that the override switch is in the on position.
- To turn the outlet on and off using a SMART LINKING CONTROL remote or master controller, the remote or controller must first be programmed with the SMART LINKING CONTROLS 15A Outlet's ID. Please read the remote or controller's instructions on how to add units.
- To transmit the 15A outlet's ID, press and hold the button at the top of the unit. After holding the button for approximately 5 seconds, the LED will begin to flash. This means the unit is transmitting its ID. The ID will continuously re-transmit as long as the button is held and the LED is flashing.

Please Note: Information & specifications provided are subject to change without notice.
