

Winteriser Instructions

Thank you for choosing the Pool Pro Winteriser Pack.

1. Test and balance pool water at your local Pool Pro stockist.
2. Super-chlorinate pool with Pool Pro Stabilised Chlorine. As a rule super-chlorination is 4 times a daily dosage - please refer to the product for correct dosage rates and instructions.
3. Brush walls & floor of the pool.
4. Wait 48 hours, then clean pool thoroughly.
5. Backwash & rinse sand filter. If cartridge filter, remove & clean the cartridge element and reinstall.
6. Adjust pH to 7.2 – 7.6.
7. Add Pool Pro Winteriser. Please refer to the product for correct dosage rates and instructions.

Mix in a bucket of water and broadcast over the pool surface.

Run filter for a minimum of 3 hours after, to circulate the Winteriser.

DO NOT ADD ANY CHLORINE OR ALKALINE BASED PRODUCTS WITHIN 48 HOURS OF ADDITION OF WINTERISER.

8. After circulating for 3 hours, add a dose of Pool Pro Supershine. Please refer to product for correct dosage rates and instructions. Run filter for a minimum of 4 hours to circulate the product.
9. Turn the filter off and allow any sediment to settle to the pool floor, vacuum if necessary, backwash and rinse filter (or clean cartridge if cartridge filter).
10. Check with your local Pool Pro stockist for advice on reducing running times through winter. As a guide, filtration should run for a minimum of 2 – 4 hours per day after winterising.

HAVE YOUR POOL WATER TESTED EVERY 2 – 4 WEEKS THROUGH WINTER TO ENSURE COPPER AND CHLORINE LEVELS ARE MAINTAINED CORRECTLY.

Note: this information is provided as a guide only. Different size pools may have different requirements. Please consult your Pool Pro stockist if you have any questions.
