

# WR4VL Winteriser Instructions

**Thank you for choosing the Pool Pro Winteriser Pack.**

1. Test and balance pool water at your local Pool Pro stockist.
2. Super-chlorinate your pool. As a rule super-chlorination is 4 times a daily dosage - please refer to the product for correct dosage rates and instructions.
3. Brush walls & floor of the pool.
4. Backwash & rinse sand filter. If cartridge filter, remove & clean the cartridge element and reinstall.
5. Add 1L Pool Pro Phosphate Remover through the skimmer box and run filter for a minimum of 4 hours to circulate the product. Please refer to the product for correct dosage rates and instructions.
6. Wait 48 hours, then clean pool thoroughly.
7. Backwash & rinse sand filter. If cartridge filter, remove & clean the cartridge element and reinstall.
8. Adjust pH to 7.2 – 7.6.
9. Mix the required amount of Pool Pro Winteriser in a bucket of water and broadcast over the pool water surface. Please refer to the product for correct dosage rates and instructions.

Run filter for a minimum of 3 hours after, to circulate the Winteriser.

**DO NOT ADD ANY CHLORINE OR ALKALINE BASED PRODUCTS WITHIN 48 HOURS OF ADDITION OF WINTERISER.**

10. After circulating for 3 hours, add the Pool Pro Supershine in a bucket of water and broadcast over the pool water surface. Please refer to the product for correct dosage rates and instructions. Run filter for a minimum of 4 hours to circulate the product.
11. Check with your local Pool Pro stockist for advice on reducing running times through winter, as a guide filtration should run for a minimum of 2 – 4 hours per day after winterising.

**HAVE YOUR POOL WATER TESTED EVERY 2 – 4 WEEKS THROUGH WINTER TO ENSURE COPPER AND CHLORINE LEVELS ARE MAINTAINED CORRECTLY.**
